Presenter: Dr. Tina Lang

Title: Dress up your research – Practical help for pretty presentations

Abstract:

Have you ever been distracted by bad presentation slides which discouraged you to mentally follow the content?
To me, this has definitely happened, and I often feel that it would only take small changes to vastly improve the presentation. On the other hand, I often give presentations to a non-statistical audience where I need to carefully consider how to design my slides in order to get the maximum amount of statistical understanding across in a optimally long lasting manner.
As I am also very passionate about visualizations, I was happy to accept when asked to share my experience of preparing pretty slides with the Young Statisticians community. In this presentation I will point out important parts of a good presentation, general principles and some personal preferences.
Looking forward to seeing you online!
