The Department of Population-Based Medicine (PBM) focuses on population health. Our goal is to better understand the influences of behavioral, environmental, biological, social, economic, cultural, and psychological factors on health and disease in populations or population groups to develop better interventions for prevention, health promotion, and medical care on a broad scale.

Population-Based Medicine works with epidemiological and statistical methods and models. The focus is on identifying patterns in risk factors for disease and protective factors for health. The identification of such determinants and their interaction supports the development of more specific health guidelines to promote the physical and mental health of the population.

We are seeking an outstanding researcher engaged in public health-related research (population health, epidemiology, biostatistics, medicine, or psychology) at a high international level. This research should be documented through publications in high-quality journals. The successful candidate is expected to develop an active research program in population-based medicine with a focus on behavioural factors, chronic conditions, mental health, stress-related conditions, or digital methods. The candidate is also expected to play a key role in the development of the department.

The requirements of the position include the completion of a doctorate (PhD, MD, DSc.), at least one year of postdoc experience, excellent knowledge of English, international experience, and experience in working with population-based studies. Additional qualifications in health management, health economics, or digital (mental) health would be advantageous. We expect leadership skills, the ability to work in international and interdisciplinary teams, and enthusiasm in teaching. The candidate is expected to supervise students and research staff and to contribute to teaching in the international M.Sc. program Population-Based Medicine.

Applicants should send a

- CV (including publication record, conference contributions, teaching experience, etc.)
- Research statement of maximally 3 pages
- Names and email addresses of three professional references (current or previous research supervisors) - Transcript of records
- TOEFL scores or other evidence of English and/or German proficiency

Please send your application exclusively by e-mail (PDF attachment) to Norbert.schmitz@med.uni-tuebingen.de, where also informal inquiries can be addressed.

We offer remuneration in accordance with TV-L (collective wage agreement for the Public Service of the German Federal States), severely handicapped persons with equal qualifications are given preferential consideration. The University of Tübingen strives to hire more female scientific staff, and therefore emphatically requests women to apply for this position. Interview expenses are not covered. Please note the applicable vaccination regulations. Personnel appointments will be made pursuant to the fundamental stipulations of the legal statutes for universities in Germany.
